

Ontario

Employment in Ontario was little changed in July, according to the latest seasonally adjusted estimates from Statistics Canada. Working persons declined by an estimated 15,000 (0.2%) compared with June, which is too small to be statistically significant. The unemployment rate inched up 0.2% to 8.5% of the labour force. Employment has been trending up and the unemployment rate trending down in Ontario since mid-2009 and these trends will very likely continue.

Full-time employment fell by an estimated 30,000 persons (0.6%) in July, partly offset by an increase part-time work. Younger persons aged 15 to 24 years saw declines in both employment and the labour force. Unemployment increased among men aged 25 years and over, while the labour force increased among women of that age group.

Industry-wise, employment declined in July in finance/insurance/real estate and educational services. This was partly offset by job growth in health/social services and manufacturing.

Central 1 Credit Union forecasts the average level of employment in Ontario will rise 1.7% this year, following a 2.4% decline in 2009. The provincial unemployment rate will average 8.7% in 2010 compared with 9% last year. More favourable economic conditions next year will lead to 1.9% growth in employment and an 8.4% unemployment rate.

Regions

Employment inched up in Metropolitan Toronto in July. Regionally, the latest seasonally adjusted, short-term trends in labour market indicators are positive in Toronto, Hamilton-Niagara Peninsula, Ottawa,

Highlights:

- *Full-time employment down in July*
- *Jobs in educational and finance/insurance/real estate services down*
- *Jobs in health/social services and manufacturing up*
- *Latest labour market trends are positive in most regions except Muskoka-Kawarthas, Stratford-Bruce Peninsula and the Northwest*

Kitchener-Waterloo-Barrie, Windsor-Sarnia, London, Northeast and Kingston-Pembroke. Meanwhile, the latest labour market indicators are negative in Muskoka-Kawarthas, Stratford-Bruce Peninsula and the Northwest.

Toronto

The latest seasonally adjusted, short-term trends in labour market indicators are positive. Over the latest three months, employment rose by an estimated 36,400 persons (1.2%). Meanwhile, the unemployment rate declined from 9.4% to 9.1% of the labour force.

Hamilton-Niagara Peninsula

The latest seasonally adjusted, short-term trends in labour market indicators are positive. Over the latest three months, employment increased by an estimated 4,200 persons (0.6%) while the unemployment rate declined from 8.4% to 8.2% of the labour force.

Ottawa

The latest seasonally adjusted, short-term trends in labour market indicators are positive. Employment increased by an estimated 9,700 persons (1.4%) over the latest three months. Meanwhile, the unemployment rate declined from 6.9% to 6.5% of the labour force.

Kitchener-Waterloo-Barrie

The latest seasonally adjusted, short-term trends in labour market indicators are positive. Employment increased by an estimated 19,300 persons (3.0%) over the latest three months, while the unemployment rate declined from 8.3% to 7.7% of the labour force.

Windsor-Sarnia

The latest seasonally adjusted, short-term trends in labour market indicators are positive. Employment increased by an estimated 2,700 persons (0.9%) over the latest three months, while the unemployment rate declined from 10.5% to 1-.3% of the labour force.

London

The latest seasonally adjusted, short-term trends in labour market indicators are positive. Employment increased by an estimated 4,700 persons (1.5%) over the latest three months, while the unemployment rate declined from 8.4% to 8.0% of the labour force.

Northeast

The latest seasonally adjusted, short-term trends in labour market indicators are positive. Employment increased by an estimated 6,200 persons (2.5%) over the latest three months, while the unemployment rate was little changed at 9.3% of the labour force.

Kingston-Pembroke

The latest seasonally adjusted, short-term trends in labour market indicators are slightly positive. Total employment inched up by an estimated 300 persons (1.3%) over the latest three months, while the unemployment rate inched was little changed at 8.3% of the labour force.

Muskoka-Kawarthas

The latest seasonally adjusted, short-term trends in labour market indicators are highly negative. Over the latest three months, employment fell by an estimated 14,400 persons (7.9%). Meanwhile, the unemployment rate increased from 7.2% to 9.0% of the labour force.

Stratford-Bruce Peninsula

The latest seasonally adjusted, short-term trends in labour market indicators are negative. Employment decreased by an estimated 5,800 persons (3.7%) over the latest three months, while the unemployment rate increased from 6.9% to 7.3% of the labour force.

Northwest

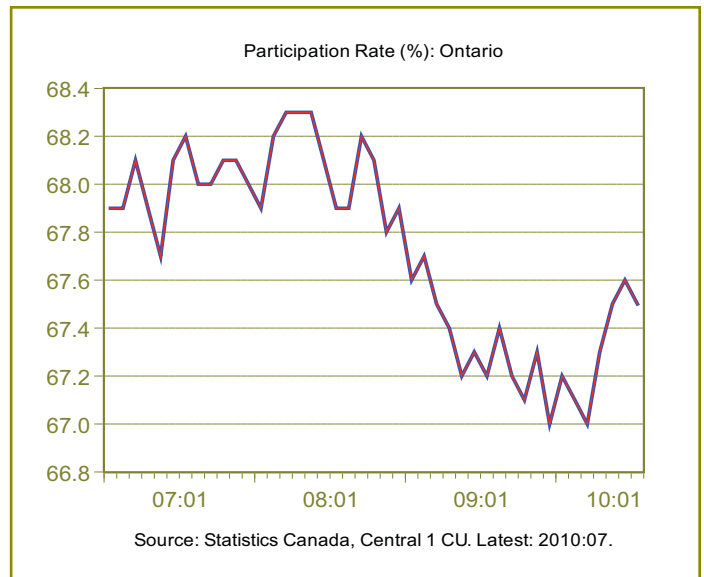

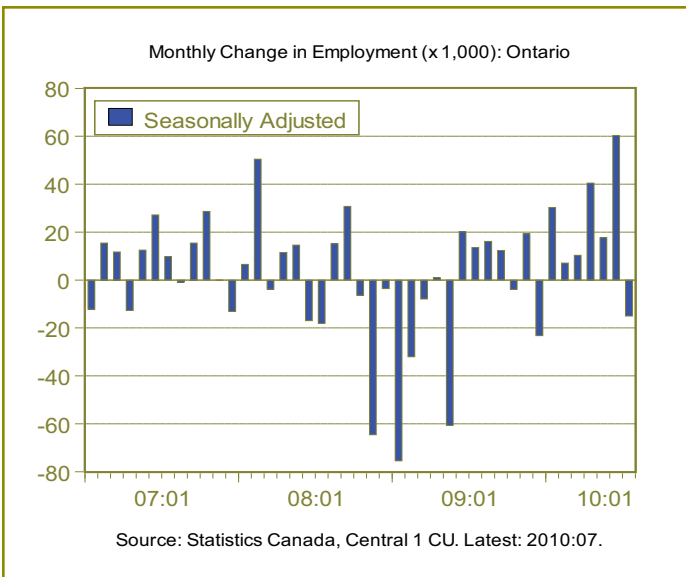

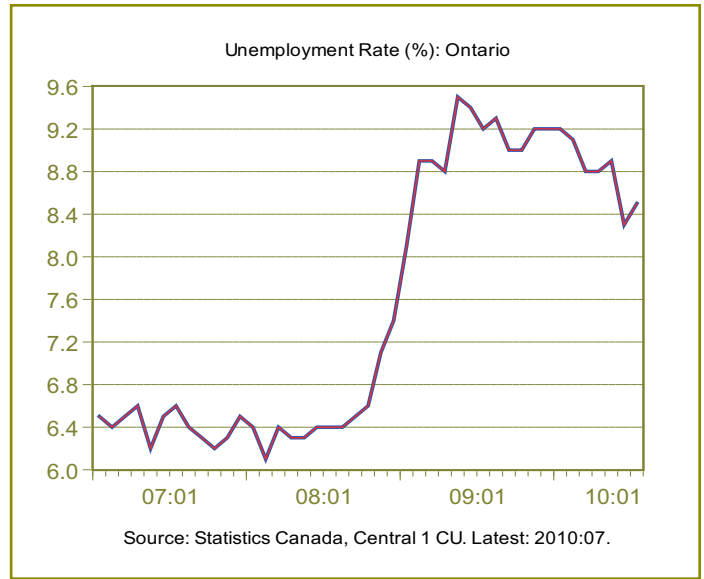

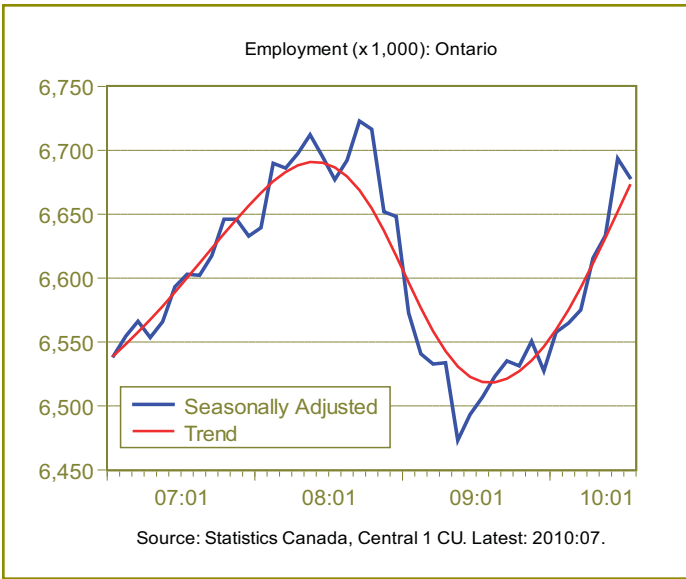

The latest seasonally adjusted, short-term trends in labour market indicators are negative. Employment declined by an estimated 2,900 persons (1.0%) over the latest three months, while the unemployment rate decreased from 6.8% to 6.5% of the labour force.

Labour Force Statistics

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.
