

El claims dropped across almost all occupations in April

The number of Ontarians on Employment Insurance (EI) regular benefits declined in April by three per cent (3,630 claimants) due to growth in the Ontario labour market, following three straight months of employment and labour force contractions. With more hiring in the month, the unemployment rate stayed steady at 5.5 per cent, according to April's Labour Force Survey. During the month, claims fell across all age groups with the largest absolute drop coming from those workers aged 25 to 54 years of age (2,700 fewer claimants).

Seasonally-adjusted initial and renewal received claims declined by 1.6 per cent in April to 69,930 (1,120 fewer claims). While robust, the decline in April was not sufficient to erase the four per cent jump in claims in March, when 2,740 claims were filed. Compared to the long-term average April's claims are 3.8 per cent lower.

Of the 3,630 fewer claimants in Ontario in April, close to 95 per cent of them lived in Ontario's urbanized centres: Census Metropolitan Areas (CMA) and Census Agglomerations (CA). Specifically looking at CMAs, significant drop in claimants were recorded in:

- Windsor (7.1 per cent)
- Oshawa (6.6 per cent)
- London (6.7 per cent)
- Greater Sudbury (5.5 per cent)

- Thunder Bay (five per cent)

With the labour market turnaround in April, many claimants were able to return to work in their occupations. Almost all broad occupation categories in Ontario reported fewer EI claimants, with a few major sectors reporting significant declines which helped to pull the month's claims down. Specifically, workers stopped collecting EI in:

- Trades, transport and equipment operators and related occupations (1,080 fewer claimants)
- Occupations in manufacturing and utilities (170 fewer claimants)
- Occupations in education, law and social, community and government services (1,710 fewer claimants)
- Business, finance and administration occupation (550 fewer claimants)

Increased hiring continues to pull the unemployment rate below six per cent and in line with our forecast for the year of 5.7 per cent. Unemployment will edge from its current position to 5.7 per cent as increased hiring draws more workers to actively look for work.

Notes and Definitions

The Employment Insurance Trends report is a supplement to Central 1 Credit Union Economics' monthly Regional Labour Market Report which reviews the latest Labour Force Survey (LFS) data over an identical reference period. Labour Force data is the only timely and relevant source for regional employment counts, labour force participation, and unemployment rates, but are limited in geographic scope. This Employment Insurance Trends report provides supplemental labour market information on changes in unemployment trends albeit at more detailed and wider geographic areas than provided in LFS data. Additionally, EI data is less volatile than LFS information given EI counts are a census from administrative data obtained from Employment and Social Development Canada, in contrast to the LFS household survey.

EI and LFS unemployment counts are highly correlated. However, caution is warranted in interpreting EI counts following a sharp uplift in unemployment. Lower unemployment does lower EI counts, but in a period of persistently weak economic activity and high unemployment, EI counts may decline given limited duration of benefits even as unemployment remains elevated (see EI definition below). EI beneficiary counts over time follow unemployment and reflect both how quickly a regional economy recovers and maximum EI duration. More relevant are upward movements or spikes to EI counts, which point to increased stress in local labour markets.

Definition

EI regular benefits are offered to people who have lost their employment through no fault of their own (for example, because of a shortage of work or because they were employed in seasonal work) and who are ready, willing, and capable of working each day but unable to find work. The Employment Insurance (EI) program offers temporary financial assistance to Canadians and individuals who are legally entitled to work in Canada, have a valid Social Insurance Number and remain in Canada during their benefit period.

The number of beneficiaries is a measure of all people who received EI benefits from a reference period that coincides with the reference week of the Labour Force Survey (LFS)

EI regular benefits expire. Provided that individuals meet eligibility requirements, individuals can receive EI from 14 weeks to a maximum of 45 weeks. Actual length of benefits depend on the unemployment rate in the region at time of individual filing, and amount of insurable hours accumulated in the last 52 weeks or during the last claim. Individuals within regions with higher unemployment rates are eligible for a longer EI benefit duration. For example, maximum EI duration in the Vancouver economic region is 38 weeks, and 40 weeks in the Toronto economic region (at this writing). In comparison, the maximum in Northern Alberta is 45 weeks. Benefits do not change if a beneficiary moves regions following the commencement of a benefit period.

Data Sources:

This report is based on data adapted from Statistics Canada from the following Cansim Tables:

276-0035 Employment Insurance Program (EI), beneficiaries by province, census division, total and regular income benefits, declared earnings, sex and age; British Columbia; Regular benefits; Both sexes; 15 years and over

276-0034 Employment Insurance program (EI), beneficiaries receiving regular income benefits by province and census metropolitan category, seasonally adjusted; British Columbia

276-0022 Employment Insurance program (EI), beneficiaries receiving regular income benefits by province, declared earnings, sex and age, seasonally adjusted; British Columbia; Regular benefits; Both sexes; 15 years and over

Seasonal-adjustment of regional data and all calculations are computed by Central 1 Credit Union. Provincial seasonal-adjustment is provided by Statistics Canada. Monthly information provided in this report is computed on seasonally-adjusted data, year-to-date calculations are computed on actual unadjusted data.
