

B.C. Employment Insurance Trends

El counts edge lower in November but forestry downturn evident

B.C.'s unemployment trend turned lower in November according to the latest count of employment insurance (EI) recipients. Total beneficiaries fell 0.9 per cent from October to 40,750 persons. While still up 4.2 per cent on a 12-month basis, this was the fewest recipients since December. The headline number is a positive signal for the labour market, specifically when tied to a second consecutive decline in the number of EI claims received following an upward trend over the past year.

It is however worthwhile to juxtapose the EI data with other labour market information. Labour Force Survey estimates for November were downbeat with declines in employment and uptick in the unemployment rate. That said, the LFS is a household survey and prone to volatility as improvements. Moreover, the unemployment rate remains low near five per cent which is lowest among provinces. Labour shortages remain an issue in B.C., although pockets of weakness are emerging in the resource industries which could show up in EI counts in future data.

A scan of the regional areas in points to a divergence in EI counts among areas. The Lower Mainland – Southwest led November's decline, along side B.C.'s northeast. In contrast, all other markets posted higher counts from October. Year-over-year, growth in EI

counts have been highlighted by double digit increases on Vancouver Island, Cariboo and North Coast and Nechako. Municipalities with some of the largest gains year-over-year include Port Alberni (up 18 per cent), Campbell River (up 25 per cent), Williams Lake (up 76 per cent), and rural areas in the Nechako. Weakness likely aligns with the substantial forestry downturn.

Notes and Definitions

The Employment Insurance Trends report is a supplement to Central 1 Credit Union Economics' monthly Regional Labour Market Report which reviews the latest Labour Force Survey (LFS) data over an identical reference period. Labour Force data is the only timely and relevant source for regional employment counts, labour force participation, and unemployment rates, but are limited in geographic scope. This Employment Insurance Trends report provides supplemental labour market information on changes in unemployment trends albeit at more detailed and wider geographic areas than provided in LFS data. Additionally, EI data is less volatile than LFS information given EI counts are a census from administrative data obtained from Employment and Social Development Canada, in contrast to the LFS household survey.

EI and LFS unemployment counts are highly correlated. However, caution is warranted in interpreting EI counts following a sharp uplift in unemployment. Lower unemployment does lower EI counts, but in a period of persistently weak economic activity and high unemployment, EI counts may decline given limited duration of benefits even as unemployment remains elevated (see EI definition below). EI beneficiary counts over time follow unemployment and reflect both how quickly a regional economy recovers and maximum EI duration. More relevant are upward movements or spikes to EI counts, which point to increased stress in local labour markets.

Definition

EI regular benefits are offered to people who have lost their employment through no fault of their own (for example, because of a shortage of work or because they were employed in seasonal work) and who are ready, willing, and capable of working each day but unable to find work. The Employment Insurance (EI) program offers temporary financial assistance to Canadians and individuals who are legally entitled to work in Canada, have a valid Social Insurance Number and remain in Canada during their benefit period.

The number of beneficiaries is a measure of all people who received EI benefits from a reference period that coincides with the reference week of the Labour Force Survey (LFS)

EI regular benefits expire. Provided that individuals meet eligibility requirements, individuals can receive EI from 14 weeks to a maximum of 45 weeks. Actual

length of benefits depend on the unemployment rate in the region at time of individual filing, and amount of insurable hours accumulated in the last 52 weeks or during the last claim. Individuals within regions with higher unemployment rates are eligible for a longer EI benefit duration. For example, maximum EI duration in the Vancouver economic region is 38 weeks, and 40 weeks in the Toronto economic region (at this writing). In comparison, the maximum in Northern Alberta is 45 weeks. Benefits do not change if a beneficiary moves regions following the commencement of a benefit period.

Data Sources:

This report is based on data adapted from Statistics Canada from the following Cansim Tables:

276-0035 Employment Insurance Program (EI), beneficiaries by province, census division, total and regular income benefits, declared earnings, sex and age; British Columbia; Regular benefits; Both sexes; 15 years and over

276-0034 Employment Insurance program (EI), beneficiaries receiving regular income benefits by province and census metropolitan category, seasonally adjusted; British Columbia

276-0022 Employment Insurance program (EI), beneficiaries receiving regular income benefits by province, declared earnings, sex and age, seasonally adjusted; British Columbia; Regular benefits; Both sexes; 15 years and over

Seasonal-adjustment of regional data and all calculations are computed by Central 1 Credit Union. Provincial seasonal-adjustment is provided by Statistics Canada. Monthly information provided in this report is computed on seasonally-adjusted data, year-to-date calculations are computed on actual unadjusted data.
