

## Employment Insurance beneficiaries fell by 2.6 per cent in February, full effects of COVID-19 still far off in the horizon

February was the calm before the impending storm in terms of Employment Insurance (EI) beneficiaries receiving regular benefits. By February, China and most parts of Asia were already tussling with the COVID-19 pandemic but that had not hit Canadian shores fully yet. There were some disruptions in supply chains but not enough to lay off workers in large numbers. The real bleeding will be seen once March EI numbers are out, as already foreshadowed by the sobering Labour Force Survey numbers from March. In Ontario, workers receiving regular benefits fell by 2.6 per cent or 3,180 net beneficiaries with strong falls across all age groups of workers but especially those 55-years of age or older (down by 3.3 per cent, or 1,060 net beneficiaries.) Potential workers between 15 to 24-years-old and those between 25 to 54-years-old receiving benefits fell by 1.4 per cent and 2.5 per cent, respectively.

In census metropolitan areas and census agglomerations EI beneficiaries fell in February by three per cent and 1.2 per cent, respectively.

Initial and renewal EI claims adjusted for seasonal effects saw a slight increase month-over-month of 0.4 per cent to 77,310 beneficiaries. Year-over-year beneficiaries increased by 2.4 per cent. Moreover, relative to the long-term monthly average, applicants and renewals in February were 1.1 per cent above this

trend. Again, the brunt of the COVID-19 storm was still far off in the horizon for Ontario but some weaknesses were starting to be seen very slightly as some supply chains were affected and those workers had to go on leave.

## Notes and Definitions

The Employment Insurance Trends report is a supplement to Central 1 Credit Union Economics' monthly Regional Labour Market Report which reviews the latest Labour Force Survey (LFS) data over an identical reference period. Labour Force data is the only timely and relevant source for regional employment counts, labour force participation, and unemployment rates, but are limited in geographic scope. This Employment Insurance Trends report provides supplemental labour market information on changes in unemployment trends albeit at more detailed and wider geographic areas than provided in LFS data. Additionally, EI data is less volatile than LFS information given EI counts are a census from administrative data obtained from Employment and Social Development Canada, in contrast to the LFS household survey.

EI and LFS unemployment counts are highly correlated. However, caution is warranted in interpreting EI counts following a sharp uplift in unemployment. Lower unemployment does lower EI counts, but in a period of persistently weak economic activity and high unemployment, EI counts may decline given limited duration of benefits even as unemployment remains elevated (see EI definition below). EI beneficiary counts over time follow unemployment and reflect both how quickly a regional economy recovers and maximum EI duration. More relevant are upward movements or spikes to EI counts, which point to increased stress in local labour markets.

### Definition

EI regular benefits are offered to people who have lost their employment through no fault of their own (for example, because of a shortage of work or because they were employed in seasonal work) and who are ready, willing, and capable of working each day but unable to find work. The Employment Insurance (EI) program offers temporary financial assistance to Canadians and individuals who are legally entitled to work in Canada, have a valid Social Insurance Number and remain in Canada during their benefit period.

The number of beneficiaries is a measure of all people who received EI benefits from a reference period that coincides with the reference week of the Labour Force Survey (LFS)

EI regular benefits expire. Provided that individuals meet eligibility requirements, individuals can receive EI from 14 weeks to a maximum of 45 weeks. Actual length of benefits depend on the unemployment rate in the region at time of individual filing, and amount of insurable hours accumulated in the last 52 weeks or during the last claim. Individuals within regions with higher unemployment rates are eligible for a longer EI benefit duration. For example, maximum EI duration in the Vancouver economic region is 38 weeks, and 40 weeks in the Toronto economic region (at this writing). In comparison, the maximum in Northern Alberta is 45 weeks. Benefits do not change if a beneficiary moves regions following the commencement of a benefit period.

### Data Sources:

This report is based on data adapted from Statistics Canada from the following Cansim Tables:

**276-0035** Employment Insurance Program (EI), beneficiaries by province, census division, total and regular income benefits, declared earnings, sex and age; British Columbia; Regular benefits; Both sexes; 15 years and over

**276-0034** Employment Insurance program (EI), beneficiaries receiving regular income benefits by province and census metropolitan category, seasonally adjusted; British Columbia

**276-0022** Employment Insurance program (EI), beneficiaries receiving regular income benefits by province, declared earnings, sex and age, seasonally adjusted; British Columbia; Regular benefits; Both sexes; 15 years and over

Seasonal-adjustment of regional data and all calculations are computed by Central 1 Credit Union. Provincial seasonal-adjustment is provided by Statistics Canada. Monthly information provided in this report is computed on seasonally-adjusted data, year-to-date calculations are computed on actual unadjusted data.
